POWERED BY TYPESENSE

LaundroStat

Clean clothes. **Friendly competition.**

A hosted social laundry showcase for Purdue University West Lafayette.

Student-built synthetic demo · Not affiliated with or endorsed by Purdue, University Residences, CSC ServiceWorks, CSCPay, or Typesense.

THE PROBLEM

Laundry is easy to put off.

Dorm laundry is repetitive, inconvenient, and usually done alone.

When the routine slips, friends have no respectful way to coordinate a laundry day or offer a little encouragement.

01 **A chore with no shared routine**

02 **Private behavior invites bad assumptions**

03 **Accountability often feels like a call-out**

What if laundry felt more social—and a little more fun?

THE IDEA

Turn laundry into a social routine.

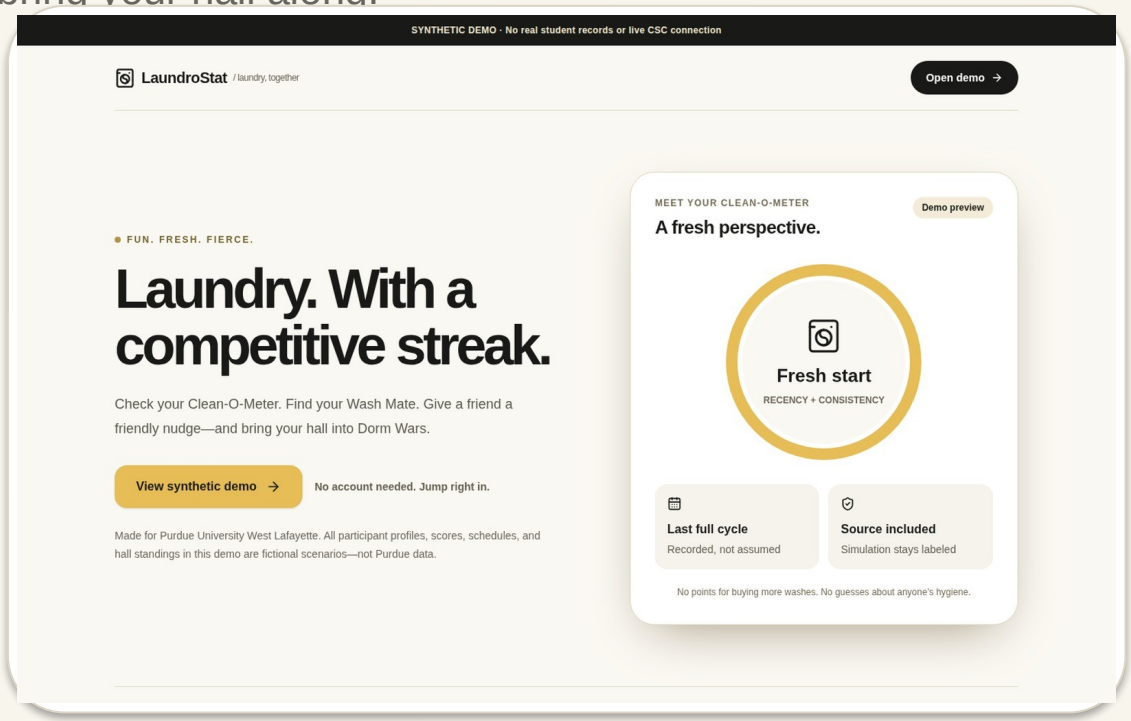

One simple loop: understand your routine, find support, and bring your hall along.

01 **Check** — See your Clean-O-Meter.

02 **Match** — Find a Wash Mate.

03 **Encourage** — Send a consenting friend a preset nudge.

04 **Compete** — Join Squeaky/Stinky Squads and Dorm Wars.

FICTIONAL PARTICIPANTS · REAL HOSTED INTERACTIONS

One routine. Five ways to play.

Clean-O-Meter

Recorded recency + consistency, with the source shown.

Friendly nudges

Search consenting friends by recorded activity period.

Wash Mates

Match overlapping usual laundry days and time windows.

Squeaky / Stinky

Playful top and bottom eligible user squads.

Dorm Wars

Normalized synthetic residence-hall averages.

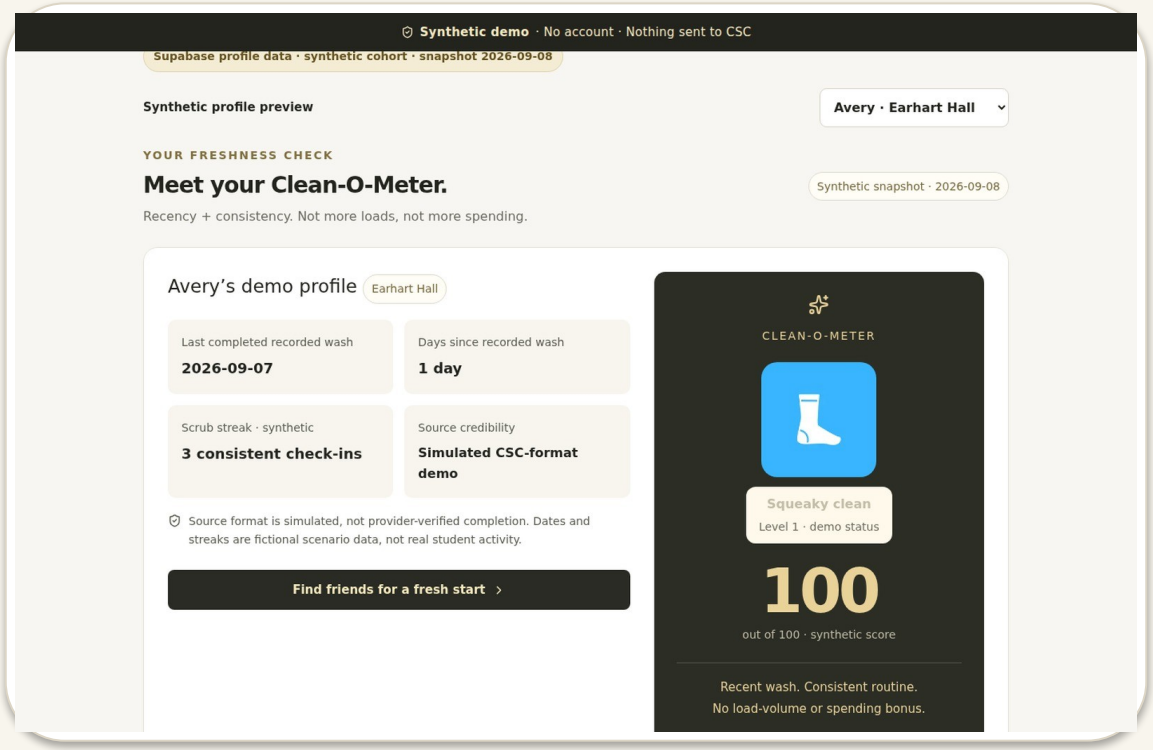

HOSTED DEMO · Isolated actions save to the browser session or presentation account.

Meet the Clean-O-Meter.

A transparent demo model—not a hygiene judgment.

100 − (4 × days since recorded wash) + (2 × scrub streak)

- Scrub streak is capped at 6.
- Final score is bounded from 0 to 100.
- Unknown or incomplete tracking gets no score.
- More loads, money, and claimed weight never buy points.

ILLUSTRATIVE DEMO · NOT POLICY, PROVIDER MEASUREMENT, OR HYGIENE JUDGMENT

TRUST BY DESIGN

Fair by design.

The rules make the game legible without turning private behavior into spectacle.

EQUAL FOOTING

Recency and consistency—not purchase volume or load count.

PRIVATE BY DEFAULT

Private, nonconsenting, and unknown profiles stay out of rankings.

CLEAR RANKS

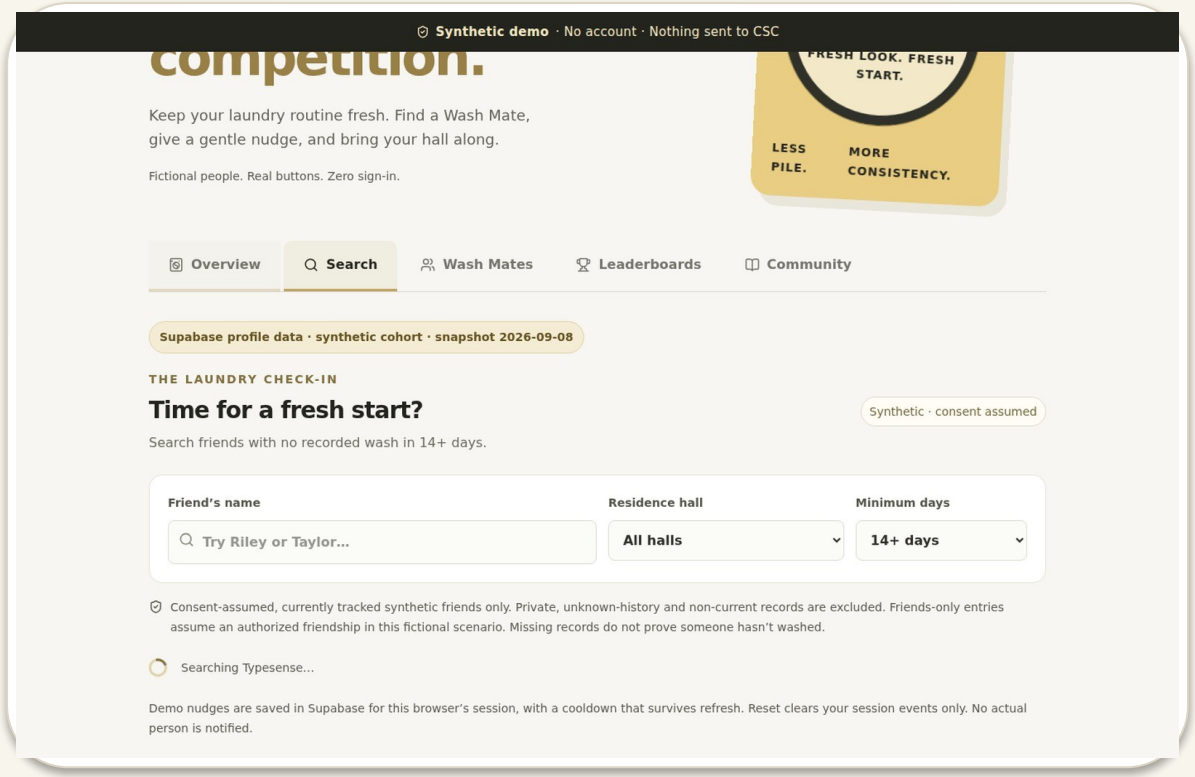

Ties share ranks. Squeaky and Stinky groups never overlap.

NORMALIZED HALLS

Dorm Wars divides by the eligible synthetic roster—not building capacity.

Every score keeps its source context visible.

Encouragement, not exposure.

A respectful nudge loop

1. **Search consenting synthetic friends**
2. Filter by no recorded wash in the selected period
3. **Send one preset "fresh start" nudge**
4. Respect the 72-hour recipient cooldown
5. Save privately to the session or demo account

NO REAL PERSON IS NOTIFIED

ARCHITECTURE

How the hosted demo works

Provider-backed synthetic workflows with explicit consent and data boundaries.

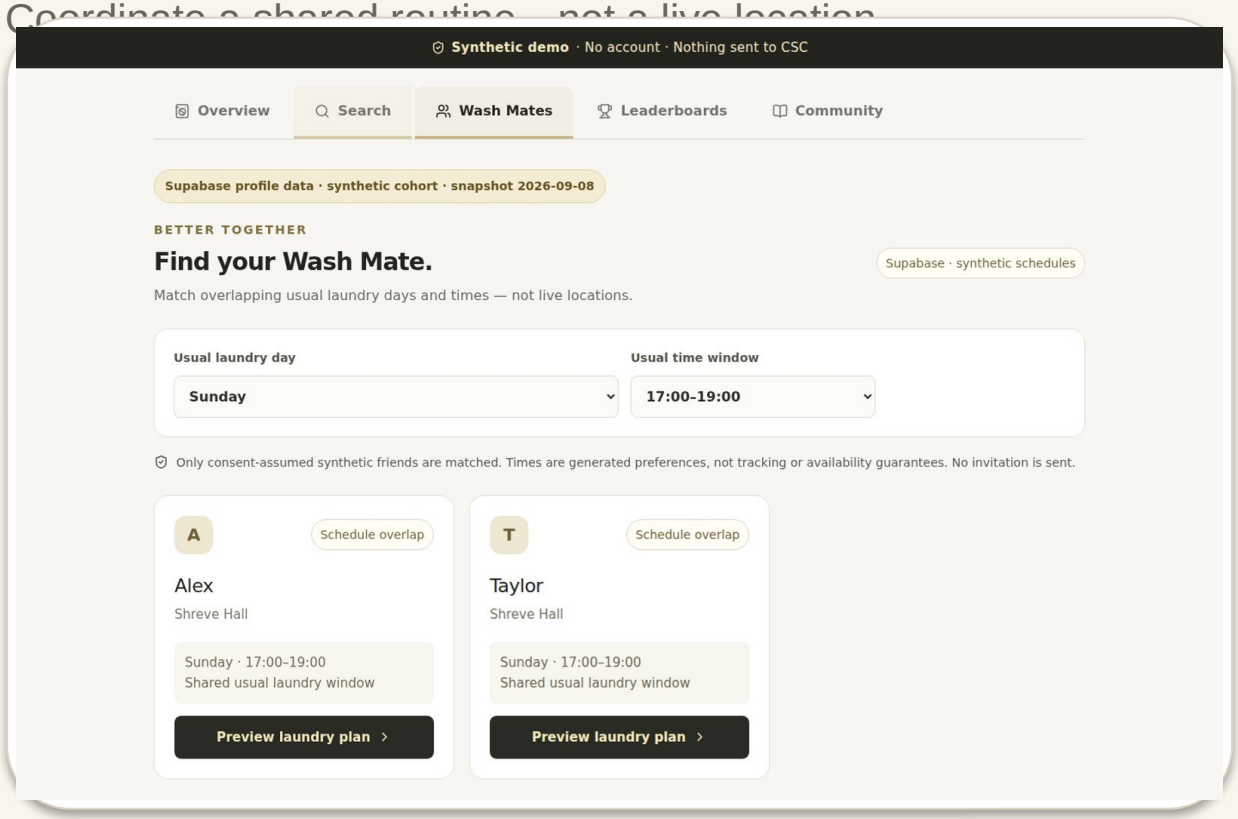

LOAD	Browser	→	Next.js 16	→	Supabase synthetic data
SEARCH	Friend filters	→	Typesense Cloud	→	Supabase consent recheck
SAVE	Preset action	→	Server-only handler	→	Private session/account event

NO LIVE CSC/CSCPAY · NO QR OR VIBRATION SENSOR · NO WEIGHT OR CYCLE/PHOTO VERIFICATION

BETTER TOGETHER

Find your Wash Mate.

Coordinate a shared routine — not a live location.

How matching works

- Choose your usual laundry day.
- Select a general time window.
- Find consenting synthetic friends with overlap.
- See why each schedule matches.

**Coarse fictional preferences—
not observed student movement.**

LIVE DEMO

Let’s see LaundroStat in action.

The public showcase needs no account. An optional demo account saves synthetic actions across sign-ins.

laundrostat.vercel.app/demo

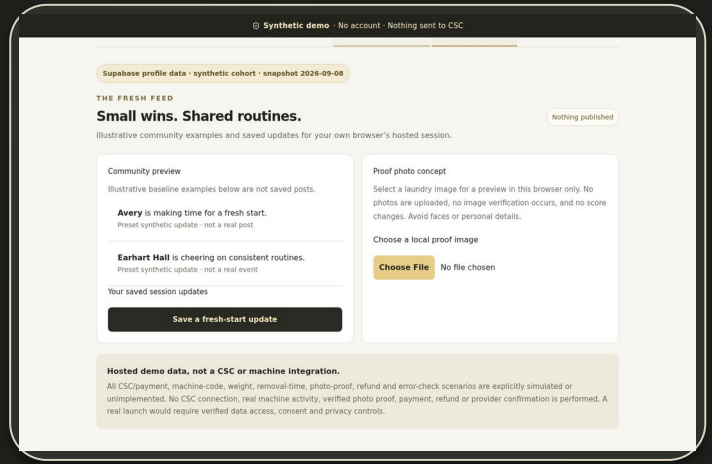

01 Clean-O-Meter →

02 Friend Search →

03 Wash Mates →

04 Squeaky/Stinky + Dorm Wars →

05 Community

Fictional people. Real buttons. Nothing sent to CSC.

THE STACK

Built as a real hosted product demo.

EXPERIENCE

Next.js 16
React 19
TypeScript
Tailwind CSS 4

INFRASTRUCTURE

Vercel
Supabase / PostgreSQL
Server-only handlers
RLS + privilege controls

SEARCH + QUALITY

Typesense Cloud
Supabase revalidation
Vitest
Playwright

REAL INFRASTRUCTURE · SYNTHETIC PARTICIPANTS · NO LIVE CSC INTEGRATION

From showcase to responsible pilot.

Validate the human need before adding more technical surface area.

01	INTERVIEWS	**Validate the idea with real student interviews.**
02	OPT IN	**Add opt-in participant onboarding and privacy controls.**
03	AUTHORIZE	**Pursue written authorization from housing and laundry providers.**
04	INTEGRATE	**Use verified machine events only through an approved data source.**
05	PILOT	**Pilot with one small residence-hall group before campus expansion.**

MERP

Thank you.

Fresh habits. **Friendly competition.**
